# Crackersystem C1200

LACOTEC now also offers the cracker system, which has been tried and tested for 25 years, for mounting on the Kemper mounted chopper for the Kemper C1200 with the new Sharkcut cracker discs.

With a working width of 240mm and maintenance-free drives, the system convinces with its energy saving use, and 100% grain crushing in comparison to conventional friction sheets.

The entire cracker channel is adapted to the chopper housing with the help of precise templates.

High speeds without speed differences between the two cracker rollers allow a smooth shredding process and high throwing performance without a post-accelerator.

The cracker shows all its quality with all chop lengths.

KTL primed and powder-coated components are extremely resistant and long-lasting against vegetable juices.

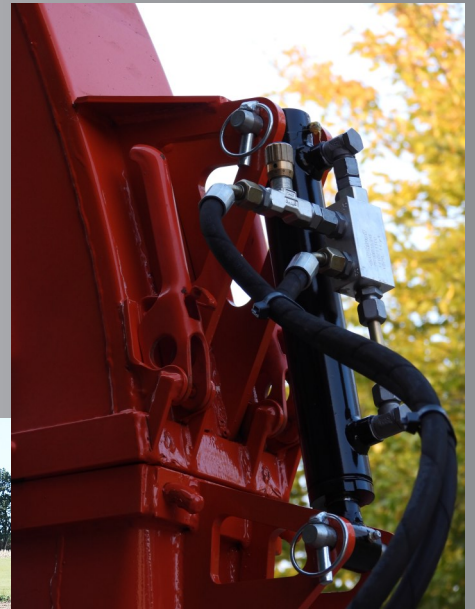

# Cracker System C1200

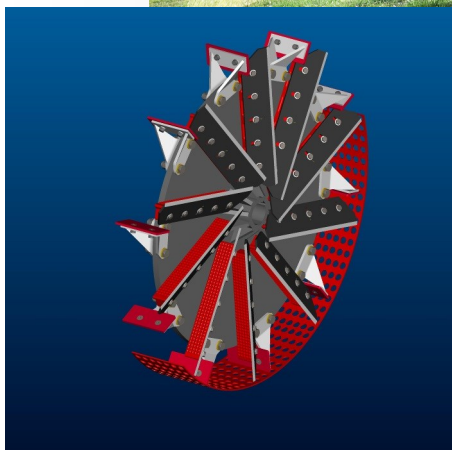

Spring-loaded power belt drives for safe and low-maintenance use

Cleaning sheets and very good accessibility enable quick reuse in the event of blockages or during cleaning

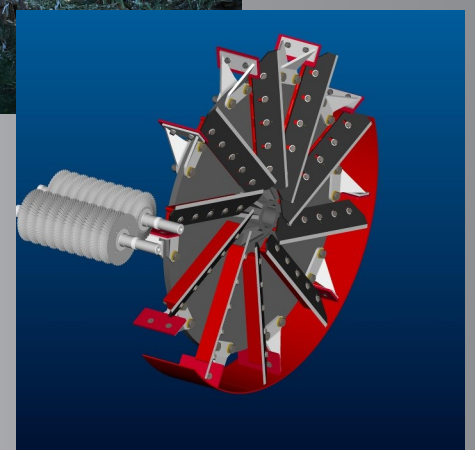

Hydraulic tower controls and chute extensions ensure convenient use with large trailers and a clean forage stream.

Superior performance  
High throughput

The disc cracker is the guarantee for one hundred percent kernel shredding, even with long chopping lengths without performance-sapping friction floors.  
Only about 15 kW power requirement!
